TITLE : ENDOSCOPIC DEVICE

ABSTRACT : PURPOSE: To provide an endoscopic device which is provided with remedy for EMC to lessen the radiation and intrusion of unnecessary radiation noises, is small in size and light in weight and has excellent operability.

CONSTITUTION: A connector part 13 is provided with an electric connector part 14 on its side. An electric cord having a connector freely attachable and detachable to and from a video processor is connectable to this electric connector part 14. An electromagnetic shielding cover 20 is put on the connector part 13 so as to cover the entire part of the connector part. This electromagnetic shielding cover 20 is constituted by braiding resin sheets contg. electromagnetic absorbers, such as ferrite or fine metallic wires of stainless steels, etc., to a sheet form. A terminal 22 disposed at the front end of a grounding wire 21 electrically mounted at the connector part 13 is connected to the reference potential of a light source device or is grounded via this light source device in the case the connector part 13 is covered with the electromagnetic shielding cover 20 formed of the fine metallic wire to the sheet form.
